

**Listing of Claims:**

**Claim 97 (cancelled).**

**Claim 98 (previously amended)** An appliance door latch for retaining a striker member, the latch comprising:

a latch frame affixable to a portion of the appliance;

a carrier member held by the latch frame to move between first and second positions;

a spring biasing the carrier member toward the second position;

a gripping member supported on the carrier member to move with the carrier member and rotate independently with respect to the carrier member about a rotational axis, the gripping member rotating to capture a portion of the striker member in a capture position when the striker member enters an opening formed in the gripping member and rotating to release the striker member in a release position when the striker member exits the opening;

a stop device cooperating with the gripping member to hold the carrier member in the first position with the spring in a high state of inner tension when the gripping member is in the release position and to release the carrier member to the second position with the spring in a lower state of inner tension when the gripping member rotates to the capture position, the stop device providing a contact portion for rolling contact with the gripping member;

wherein the stop device includes one or more rolling contact, bearings to support the contact portion for rotation with respect to the latch frame; and,

wherein the stop device includes a pin forming the contact portion at its outer circumferential surface and rotatably supported at its ends by rolling contact bearings.

**Claim 99 (cancelled)**

**Claim 100 (cancelled)**

**Claim 101 (cancelled).**

**Claim 102 (cancelled).**
